Informed consent of patient

The German law (**Gendiagnostikgesetz – GenDG**) defines under which circumstances genetic testing of a human individual is legal. *Diagnostic* testing can only be conducted with the patient's informed consent which requires documented consultation with a doctor. *Predictive* testing requires genetic counselling by a human genetics specialist prior to and after the investigation, or the patient's written renunciation.
Please fill out the informed consent carefully and completely and sign it. Otherwise no molecular genetic testing can be performed!

Molecular Genetic Testing

3-5 ml EDTA-blood (send by normal mail); blood collection date:_____
Turnaround time: 2-4 weeks, more than one analysis and rare analyses may take up to 8 weeks

External quality assurance (EQA):

our laboratory participates regulary on „Ringversuche" of the national Reference Institute for Bioanalytics (RfB). These RfB-laboratories determine method-independent target values, so called reference methods values, in control materials for external quality control. In addition we routinely perform laboratory exchanges.
